Table of Reagents	90

Welcome to Organic Chemistry 360's Laboratory Report Workbook

This Report Book, along with the 'Chemistry 360 Lab Manual', will help you prepare for four-five days straight of supervised lab instruction. All preparatory work in this report book (~12 h to finish, see list on page 3), may be completed and shown to the Chemistry Lab Co-ordinator / Lab Instructor prior to beginning the labs.

In order to successfully complete the laboratory component, please be aware of the following 4 step process of instruction. It is the intention of this Chem360 Report Workbook to provide you with the means of completing all four steps.

Step 1: First we tell you what you are going to do.

Find out by reading the lab manual, doing the pre-lab questions in this report book, and filling out the Table of Reagents etc., i.e., preparing for the labs at home. (By doing so you are able to work more efficiently in the lab and the over-all time spent in the supervised lab can be the usual 32 hours.)

Step 2: Next we show you how to do it.

When you come to the lab, a lab instructor will give a safety orientation, followed by a series of mini lab lectures on each experiment. Various techniques will be demonstrated and you will be shown how to handle chemicals, dispose of hazardous waste, and operate the equipment.

Step 3: Lab Time: Now you do what you've read, been told, and shown.

This is the time you spend in the lab performing your experiments, making your products, and recording your results in this report workbook

**Step 4: Finally, you tell us what you did.**

This is the report writing stage. Actually most of your reports will have been written while in the lab. At home you will only have to do your calculations, write your discussion and conclusion and answer

the questions at the end of each experiment.

Report Book Structure and How to Prepare for the Labs:

This CHEM360 Report Book is to be used in conjunction with the CHEM360 Organic Chemistry II Lab Manual. It consists of an Introduction, Experiment Report Forms, Table of Reagents and Unknown Spectra. The reports are to be **completed one month** after of the lab session you attended. As a safety precaution, it is advisable to photocopy your reports before mailing them to your tutor for marking. Note: the marked reports are not returned to you.

How to best do the Report Book Exercises

1. First read through the lab manual introduction, and then answer the pre-lab questions for each experiment.
2. Complete the Objectives in the Experiment Report.
3. Complete the Procedure (Refer to lab manual pages) and make a flowchart if necessary.
4. Complete the Table of Reagents for each experiment (detach a copy of the TOR to avoid flipping back and forth)
5. You are now ready to come to the lab and do the experimental work.

Note: Each experiment in the report book has the following headings:

Report Book Heading	Purpose and Use
1. Experiment Prelab Questions	Answer these questions to help you prepare and understand what you are doing in the lab. In order to answer these questions you will have to consult the CHEM360 Lab Manual, and to read the 'Introduction to Concept', and 'Background Information' sections of this manual. To get feedback, you may submit them to the lab coordinator before the lab session begins.*
2. Objectives	Lists what you should learn from the lab. (see also lab manual). Use this information to fill in 'Objectives' in your Lab Write-up. When appropriate, write out any chemical reactions.
3. Introduction	Briefly state how the objectives of the experiment will be achieved and provide the relevant background information.
4. Procedure	Refer to the lab manual and only note any modifications or changes. Fill out the Table of Reagents**. Use the flowchart procedural step table to record your work and observations.
The sections of your report shown below are completed while doing the experiment, or at home after the lab session.	
5. Results	While doing or immediately after your experiment, record your results in this section of the report.
6. Discussion and Conclusion	As soon after the lab as possible, discuss your results in light of the objectives, and make the appropriate conclusions. Remember to discuss sources of potential error and loss.
7. Post Lab Questions	Answer these questions to prove you understand what you did in the lab. To be completed after the experiment is finished. Submit your answers by mail along with the Course Evaluation.

*CHEM360 Prelab questions will soon be available online at: <http://science.pc.athabascau.ca/chem360.nsf>

**CHEM360 Reagents is available online at: <http://science.pc.athabascau.ca/chem360.nsf>

Acknowledgements:

The authors wish to especially thank Ms. Aimee Caouette for all the artwork. Athabasca University also wishes to thank Drs. K. Tanabe and T. Tamura and for their permission to use the IR and ¹H-NMR Spectra used in our lab manual and report book (pp. 15, 35, 46, 60, and 73). They were obtained from the SDDBS web site: <http://www.aist.go.jp/RIODB/SDDBS/>.

Each experiment in CHEM360 has been modified and rewritten from other sources, keeping the particular needs of Athabasca University students in mind. The format of this Report Book have been checked in our Athabasca laboratories by Dr. Lawton Shaw, Klaus Thomson, Nyron Jaleel, and Robert Carmichael. Special thanks to Ms. Aimee Caouette for her help on the Infrared Tutorial (Summer 1999). Also thanks to Mr. Douglas Woudstra and Mr. James Taylor (CHEM360 students 2004-05) for their helpful suggestions to improve the report book. The comments and suggestions received from all the individuals mentioned above were greatly appreciated by the Course Co-ordinator.

CHEM360 Experiment 10 Report

Date: _____

Student Name: _____

ID Number: _____

Experiment 10 Prelab Questions:**Lab Safety**

1. What are the hazards of working with concentrated acids like glacial acetic acid and sulfuric acid?
 - a) They are both extremely flammable
 - b) They are only mildly corrosive and no significant precautions are needed
 - c) Boiling these highly corrosive acids increases the danger to the experimenter, especially if the reaction flask should crack and break during heating

Equipment Preparation

2. Why must the condenser be 'clean and dry' prior to use?
 - a) Clean and dry glassware automatically guarantees a higher yield
 - b) Water is a by-product of the reaction and having 'wet glassware' will slow the reaction down
 - c) Chemists are just neat
3. The following diagram for the 'reflux apparatus' used in Experiment 10 is correctly labelled.
 - a) True
 - b) false

Reagent Preparation

4. What are the two starting reagents used in a Fisher Esterification?
- carboxylic acid and a ketone
 - alcohol and an ester
 - alcohol and a carboxylic acid
 - carboxylic acid and an ester

Reaction

5. Is the Fisher esterification reaction reversible?
- yes
 - no
6. How long must you 'reflux the reaction' in order to maximize the amount of product formed?
- 20 min.
 - 20-40 min.
 - 60 min. or more (The longer the better!)
7. What acts as the nucleophile (Nu), and what acts as the electrophile (E) in this reaction?
- Nu = sulphuric acid, E = acetic acid
 - Nu = isoamyl alcohol, E = acetic acid (protonated form)
 - Nu = isoamyl alcohol, E = acetic acid
 - Nu = acetic acid, E = isoamyl acetate

Reaction Workup

8. What gas is evolved during the reaction workup phase, when you wash the crude ester with 5% Na_2CO_3 (Procedure step C-5)?
- $\text{H}_2(\text{g})$
 - $\text{N}_2(\text{g})$
 - $\text{O}_2(\text{g})$
 - $\text{CO}_2(\text{g})$

Product Characterization

9. How is the ester product purified and characterized?
- Yield, refractive index, % yield, infrared spectral analysis
 - Boiling point, refractive index, and infrared spectral analysis
 - Yield, boiling point, refractive index, % yield, and infrared spectral analysis
10. What major differences in absorption bands would you expect to see in the infrared spectra of isoamyl alcohol, and isoamyl acetate, the ester product?
- Broad 3300 cm^{-1} absorption for alcohol, sharp $\sim 1740\text{ cm}^{-1}$ C=O of carbonyl in the ester
 - Sharp $\sim 2900\text{ cm}^{-1}$ absorption(s) for $\text{sp}^3\text{ C-H}$, no $\sim 2900\text{ cm}^{-1}$ absorption for $\text{sp}^3\text{ C-H}$ in ester.
 - Sharp 3300 cm^{-1} absorption for alcohol, broad $\sim 1740\text{ cm}^{-1}$ C=O of carbonyl in the ester.
 - Sharp $\sim 1200\text{ cm}^{-1}$ absorption for C-O of alcohol, none for the ester

Procedural Step	Comment or Observation and Inference

Table 10.3. Table of Product Data for Isoamyl acetate, Fisher Esterification Product.

Table 10.3. presents the summary of the results of the experiment. The calculations for limiting reagent, theoretical yield and percent yield are shown below the table. Note: _____ was found to be the limiting reagent.

	Yield Mass (g)	Appearance of Liquid	Boiling Pt.* (°C)	Refractive Index n_D obs.	Refractive Index [^] (n_D^{20})	Theoretical Yield (g)	% Yield
Isoamyl acetate							

*Corrected for barometric pressure effects using the formula...

^Corrected to 20°C using the formula:

Limiting Reagent and Theoretical Yield Calculation:

Moles of acetic acid used in the reaction =

Moles of isoamyl alcohol used in the reaction =

Theoretical Yield of iosamyl acetate =

% Yield Calculation:

Table 10.4. Tabulation of Characteristic Infrared Absorptions for Starting reagents and Product.

Table 10.4 contains the results of the Infrared Spectral Analyses for the isoamyl alcohol, acetic acid, and isoamyl acetate as obtained by thin film in a FTIR. See also attached spectra for peak numbering and identification.

Isoamyl alcohol	Peak Code#	Wavenumber (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strg., med., or weak)	Functional Group Indicated
>3000 cm ⁻¹ Region					
3000-2000 cm ⁻¹ Region					
2000-1400 cm ⁻¹ Region					
Fingerprint Region					

Functional Groups Absent:

Acetic acid	Peak Code#	Wavenumber (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strg., med., or weak)	Functional Group Indicated
>3000 cm ⁻¹ Region					
3000-2000 cm ⁻¹ Region					
2000-1400 cm ⁻¹ Region					
Fingerprint Region					

Functional Groups Absent:

Isoamyl acetate	Peak Code#	Wavenumber (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strg., med., or weak)	Functional Group Indicated
>3000 cm ⁻¹ Region					
3000-2000 cm ⁻¹ Region					
2000-1400 cm ⁻¹ Region					
Fingerprint Region					

Functional Groups Absent:

Discussion:

Comments on reasons for yield (high or low), purity (high or low), sources of error, infrared spectrum results:

Conclusion:

Structure of Product

Experiment 10 Post Lab Questions:

1. If the cost of **both** the alcohol and carboxylic acid were prohibitive, how would you maximize the yield of your Fischer esterification product while keeping costs down?
2. Why did you wash your product with water (3X), before washing it with the solution of sodium hydrogen carbonate? What was the purpose of washing with sodium hydrogen carbonate?
3. Explain the function of the acid catalyst in a Fischer esterification reaction.
4. What would the reactants be to produce isoamyl valerate via Fischer esterification reaction?

Acetic acid (thin liquid film on KBr)

Isoamyl alcohol (thin liquid film on KBr)

Isoamyl acetate (thin liquid film on KBr)

CHEM360 Experiment 11 Report

Date: _____

Student Name: _____

ID Number: _____

Experiment 11 Prelab Questions:**Lab Safety**

- Should you stopper the test tubes prior to heating the tubes in the Ethanolic Silver Nitrate and Sodium Iodide/Acetone Tests?
 - Yes. You must stopper the test tubes to prevent evaporation of the test compound
 - No. You should never heat closed vessel as it may explode!

**Equipment Preparation**

- Should the test tubes used in this experiment be clean and dry prior to use?
 - yes
 - no

Reagent Preparation

- What oxidizing agent is used to detect primary and secondary alcohols, but not tertiary alcohols?
 - sulphuric acid
 - sodium dichromate
 - mixture of sulphuric acid and sodium dichromate
 - Lucas reagent

Reaction

4. What is the organic product of the reaction of Lucas reagent with an alcohol?
 - a) ketone
 - b) silver halide
 - c) water
 - d) alkyl halide

5. What type of alcohol would be positive in both the Dichromate and Lucas Reagent tests?
 - a) phenol
 - b) primary
 - c) secondary
 - d) tertiary

6. S_N1 stands for?
 - a) substitution nucleophilic unimolecular
 - b) substitution nucleophilic bimolecular
 - c) substitution nucleophilic first

7. S_N2 stands for?
 - a) substitution nucleophilic unimolecular
 - b) substitution nucleophilic bimolecular
 - c) substitution nucleophilic second

8. Why is the silver nitrate test a good one to observe S_N1 reaction mechanism behaviour?
 - a) A positive reaction shows a change of color and is easily distinguished from a negative reaction
 - b) precipitates that form are easily seen in positive tests
 - c) the gas produced is easily seen in positive tests

9. Why is the sodium iodide in acetone test a good one to observe S_N2 reaction mechanism behaviour?
 - a) A positive reaction shows a change of color and is easily distinguished from a negative reaction
 - b) precipitates that form are easily seen in positive tests
 - c) the gas produced is easily seen in positive tests

Cleanup

10. What should be done with the completed test solutions?
 - a) they should be rinsed into the Halogenated organic waste container
 - b) they can be rinsed down the drain
 - c) store them in the fumehood

Bromocyclohexane			
Bromocyclopentane			
β -bromostyrene			

Conclusion:

Experiment 11 Post Lab Questions:

1. There are four isomeric alcohols having the formula $C_4H_{10}O$, and in this experiment you investigated the properties of three of them. How would you expect the fourth isomer to behave when treated with (i) acidic sodium dichromate, and (ii) Lucas reagent?
2. On the basis of your results, arrange the eleven halogen-containing compounds in order of *decreasing* reactivity in (i) S_N1 reactions and (ii) S_N2 reactions.
3.
 - a. What results would you expect to observe when benzyl alcohol, $C_6H_5CH_2OH$, is treated with (i) acidic sodium dichromate, and (ii) Lucas reagent?
 - b. What results would you expect to obtain when 1-chloro-2,2-dimethylpropane is treated with (i) ethanolic silver nitrate, and (ii) sodium iodide in acetone?

CHEM360 Experiment 12 Report

Date: _____

Student Name: _____

ID Number: _____

Experiment 12 Prelab Questions:**Lab Safety**

1. Sodium borohydride (NaBH_4) is much safer to use than lithium aluminium hydride (LiAlH_4)?
 - a) yes
 - b) no
 - c) This statement is false. They are both safe
 - d) This statement is false. They are both highly dangerous reagents!

Equipment Preparation

2. Why must you place a magnetic stir bar into the reaction vessel and use a stir plate for this reaction?
 - a) for the reaction to occur to its fullest extent, the reagents need to be continuously mixed
 - b) the magnetic stir bar serves as a site for crystal nucleation
 - c) to keep the crystalline product from settling to the bottom of the flask

**Reagent Preparation**

3. Why must you prepare the two main reagents, sodium borohydride and benzophenone, separately and then mix them together?
 - a) as a safety precaution so as to avoid an uncontrolled premature reaction
 - b) the two reagents are not miscible
 - c) you can only do one thing at a time in a chemistry lab

Reaction

4. Why do you add the sodium borohydride slowly to the benzophenone?
 - a) to avoid spilling the reagent
 - b) sodium borohydride is very difficult to handle
 - c) as a safety precaution; to control the rate of the exothermic reaction

Reaction Workup

5. What is the purpose of adding the hydrochloric acid/ice in the procedure step 5?
 - a) To dilute and lower the pH of the mixture and thereby prevent product precipitation
 - b) To decompose the excess sodium borohydride, and protonate the alcohol moiety of the final product
 - c) To prevent the decomposition of the sodium borohydride

6. Should an Erlenmeyer flask be used as the vessel to recrystallize the final product, or a beaker?
- There is no advantage. Either one could be used
 - Erlenmeyer flask. The narrower neck of the Erlenmeyer flask acts like a condenser and prevents the solvent from evaporating too quickly. Also a flask can eventually be sealed with a stopper while crystal growth is occurring.
 - Beaker. A beaker is easier to add solvent to and the recrystallized product is easier to recover from a beaker.
7. Why is hexane used as the recrystallization solvent?
- because** diphenylmethanol is soluble in hot hexane and insoluble in cold hexane
 - because diphenylmethanol is insoluble in hot hexane and soluble in cold hexane
 - because it is the only solvent available

Product Characterization

8. What is the purpose of performing TLC on the crude and recrystallized product, and benzophenone?
- To compare and determine the purity of the final product
 - To measure the yield of the final product
 - To purify the final product
9. Does the TLC sketch shown here indicate the product diphenylmethanol to be pure or impure after recrystallization?
- pure
 - impure

11. What major differences in absorption bands would you expect to see in the infrared spectra of benzophenone, and diphenylmethanol, the alcohol product?
- sharp $\sim 1710\text{ cm}^{-1}$ C=O of carbonyl in the ketone, broad 3300 cm^{-1} absorption for alcohol
 - broad $\sim 1740\text{ cm}^{-1}$ C=O of carbonyl in the ketone, sharp 3300 cm^{-1} absorption for alcohol
 - Sharp $\sim 1200\text{ cm}^{-1}$ absorption for C-O for the ketone, not present for the alcohol

ID Number: _____

Experiment 13 Prelab Questions**Lab Safety**

1. What is the major danger of using 95% ethanol?
 - a) It is corrosive
 - b) It is flammable
 - c) It is an oxidizer

Equipment Preparation

2. A stirrer/hot plate is used in this experiment in order to:
 - d) continuously mix the reagents and allow the reaction to occur to its fullest extent
 - e) the magnetic stir bar serves as a site for crystal nucleation
 - f) to keep the crystalline product from settling to the bottom of the flask

Reagent Preparation

3. How do you use the molar mass (MM, g/mol) and density (d, g/mL) of your starting aldehyde or ketone to determine the volume amount of reagent to add (mL) to the reaction, from knowing only the number of moles to use?
 - a) Moles reagent to use is divided by the MM = grams reagent, divided by the density = mL of reagent to use, i.e., $(\text{mol} / \text{MM})/d = \text{mL}$
 - b) Moles reagent to use multiplied by the MM = grams reagent, divided by the density = mL of reagent to use, i.e., $(\text{mol} \times \text{MM})/d = \text{mL}$
 - c) Moles reagent to use divided by the MM = grams of reagent, multiplied by the density = mL of reagent to use, i.e., $(\text{mol} / \text{MM}) \times d = \text{mL}$
4. What is the purpose of adding the reagent 95% ethanol (in water) to the reaction mixture of the ketone and aldehyde?
 - a) 95% ethanol is the solvent for the reaction
 - b) 95% ethanol prevents unwanted side reactions
 - c) 95% ethanol reacts with sodium hydroxide to form sodium ethoxide, which is the base catalyst for the reaction

Reaction

5. The aldol condensation is used by synthetic chemists:
 - a) because it is a reversible reaction
 - b) because it is non-reversible reaction
 - c) to form a new carbon-carbon bond

Reaction Workup

6. Will your product be essentially pure after cooling the flask in ice in Step 2 of the procedure?
 - a) yes
 - b) no

7. Will your product be essentially pure after washing your product with ice cold 95% ethanol, ice cold 95% ethanol + 4% acetic acid and again with ice cold 95% ethanol in Step 3 of the procedure?
 - a) yes
 - b) no

8. Why must the washing solutions be ice-cold in Step 3 of the procedure?
 - a) to prevent dissolving the product, which is more soluble in warm solvent than cold
 - b) to keep the reaction from warming up
 - c) to prevent unwanted side reactions

9. How will you know which solvent (95% ethanol or toluene) is more suitable for the recrystallization of your product?
 - a) the chosen solvent will dissolve less crystals when hot, and form more crystals when cold
 - b) the chosen solvent will dissolve more crystals when hot, and form more crystals when cold
 - c) the chosen solvent will dissolve less crystals when hot, and form less crystals when cold

Product Characterization

10. What reason(s) may help to explain a low percentage yield for your aldol condensation reaction
 - a) the reagents were incorrectly measured
 - b) all the washing steps resulted in the loss of some product, even when ice cold solvents were used
 - c) the chosen recrystallization solvent still kept some of the product dissolved
 - d) all of the above

Student Name: _____

ID #: _____

Experiment 14 Prelab Questions:

- ¹H-NMR is an abbreviation meaning:
 - nuclear magnetic resonance spectroscopy
 - proton nuclear magnetic resonance spectroscopy
 - carbon 13 nuclear magnetic resonance spectroscopy
- What types of information are to be found in a ¹H-NMR spectrum?
 - chemical shift and multiplicity (splitting patterns)
 - chemical shift, number of equivalent hydrogens, and the multiplicity
 - chemical shift, number of equivalent hydrogens, multiplicity, and the number of neighbouring hydrogens
 - chemical shift, number of equivalent hydrogens, multiplicity, the number of neighbouring hydrogens, and the potential signal assignment (after consulting the Shifts for Various Functional Groups table).
- If you know the chemical formula of your unknown, the 'degrees of unsaturation' calculation ($\text{deg Unsaturation} = nC + 1 + 1/2N - 1/2nH - 1/2nX$) helps you to:
 - determine the number of 'equivalent double bonds' present in your unknown (e.g., alkene = 1, alkyne = 2, cycloalkane = 1, benzene ring = 4)
 - determine the functional groups present in the unknown
 - determine the structure of your unknown
- Chemical shifts are the result of 'shielding' and 'deshielding' in the environment the proton finds around it.
 - true
 - false
- The N=n+1 rule is used to determine the number of neighbouring H
 - true
 - false
- What is the purpose of adding tetramethylsilane (TMS) to a ¹H-NMR sample prior to determining its spectrum?
 - to give an example of a highly shielded hydrogen environment
 - to serve as a reference standard
 - to serve as a blank

7. A very common splitting pattern seen in a ^1H -NMR spectrum (see Unknown X spectrum below) is the '2H quartet coupled to a 3H triplet'. Which of the following molecular fragments does this represent?
- a methyl group
 - an ethyl group
 - an isopropyl group
 - a *tert*-butyl group

^1H -NMR spectrum for Unknown X showing a '2H quartet coupled to a 3H triplet'

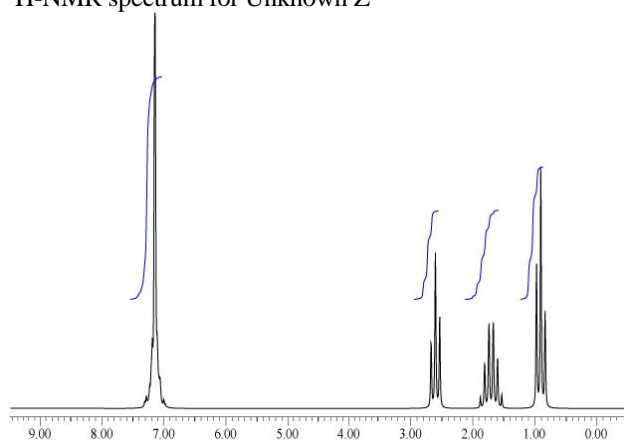

8. Another very common splitting pattern seen in a ^1H -NMR spectrum (see Unknown Y spectrum below) is a '1H septet coupled to a 6H doublet'. Which of the following molecular fragments does this usually represent?
- a methyl group
 - an ethyl group
 - an isopropyl group
 - a *tert*-butyl group

^1H -NMR spectrum for Unknown Y showing a '1H septet coupled to a 6H doublet' (ignore the singlet also shown in this example)

9. The following $^1\text{H-NMR}$ spectrum for Unknown Z shows Unknown Z to have an aromatic ring.
- a) true
 - b) false

$^1\text{H-NMR}$ spectrum for Unknown Z

10. The hardest part in determining the structure of an unknown from your NMR data, is usually the final assembly of all the fragments.
- a) true
 - b) false

ID Number: _____

Experiment 15 Prelab Questions**Lab Safety**

1. What danger exists with the Tollen's reagent?
 - a) The silver mirror that forms is high reflective to light
 - b) ammonia used is very corrosive
 - c) Tollen's reagent decomposes on standing to an explosive substance

Equipment Preparation

2. Test tube size is very important in performing functional group tests?
 - a) true. The test tube must not become so filled with reagent and test substance, that it becomes difficult to mix
 - b) true. The test tube must be completely filled with the reagent and test substance, so that it can only be mixed by stoppering and inverting the test tube
 - c) false

Reagent Preparation

3. What should the Tollen's reagent appear like after the addition of the 1.0 M ammonium hydroxide?
 - a) a brownish colored precipitate in solution
 - b) a silver colored solution
 - c) a clear and colorless solution

Reaction(s)

4. What does the Brady's Test detect?
 - a) methyl ketone groups in aldehydes and ketones
 - b) carbonyl groups of aldehydes and ketones
 - c) aldehydes only
 - d) ketones only
5. What does the Tollens' Test detect?
 - a) methyl ketone groups of aldehydes and ketones
 - b) carbonyl groups of aldehydes and ketones
 - c) aldehydes only
 - d) ketones only
6. What does the Schiff's Test detect?
 - a) methyl ketone groups of aldehydes and ketones
 - b) carbonyl groups of aldehydes and ketones
 - c) aldehydes and aldehyde impurities mostly
 - d) ketones only

7. What does the Iodoform Test Detect?
 - a) methyl ketone groups of aldehydes and ketones
 - b) carbonyl groups of aldehydes and ketones
 - c) aldehydes only
 - d) ketones only

8. Which of the following compounds gives a positive reaction to Brady's, Tollens', and Schiff's Tests above?
 - a) benzaldehyde
 - b) cyclopentanone
 - c) acetone

9. Of the following compounds, which does not react in any of the four above tests (Brady's, Tollens', Schiff's, and Iodoform Tests):
 - a) an ethyl ketone
 - b) cinnamaldehyde
 - c) ethyl benzoate
 - d) cyclohexanone

10. What must be done to the unused Tollens' reagent and any unreacted Tollens' test samples:
 - a) rinse the reagent into the General Organic waste container
 - b) dilute with water
 - c) add concentrated nitric acid to decompose the Tollens' reagent
 - d) leave reagent in the hood for someone else to find

Conclusion:

Comments on tests, sources of error, and false positives/negatives:

Experiment 15 Post Lab Questions:

1. Write a balanced equation for the reaction of acetaldehyde (i.e. ethanal) with ammoniacal silver nitrate. Remember that this is a redox reaction.

2. Outline a systematic functional group test procedure that would enable you to distinguish among hexanal, 2-hexanone, 3-hexanone, 2-hexanol, and cyclohexanol.

3. Aldehydes and ketones can also be easily distinguished by their infrared spectra and their identity deduced from their $^1\text{H-NMR}$ spectra. Explain why this is.

4. From the following results, identify the unknown compounds.
 - a) Compound A: 2,4-DNPH positive, Tollens Test positive, Schiff's test positive, Iodoform negative (see Spectrum (A) next page).

 - b) Compound B: 2,4-DNPH positive, Tollens Test negative, Schiff's test negative, Iodoform positive (see Spectrum (B) next page).

Spectrum (A): $^1\text{H-NMR}$, 400 MHz in CDCl_3 Molecular Formula $\text{C}_8\text{H}_8\text{O}_2$, δ 9.9 = 1H, δ 7.8 = 2H, δ 7.0 = 2H, δ 3.9 = 3H.Spectrum (B): $^1\text{H-NMR}$, 90 MHz in CDCl_3 Molecular Formula $\text{C}_8\text{H}_8\text{O}$, δ 7.9 = 2H, δ 7.3-7.7 = 3H, δ 2.6 = 3H.

ID Number: _____

Experiment 16 Prelab Questions**Lab Safety**

1. A procedural flowchart is **highly recommended** for performing this experiment.
 - a) true
 - b) false
2. No source of flame is allowed in this experiment because of the use of diethyl ether.
 - a) true
 - b) false

Equipment Preparation

3. Dry glassware is essential for the Grignard reaction to work because:
 - a) the Grignard reaction is easily contaminated with water
 - b) the Grignard reagent is very moisture sensitive
 - c) the Grignard reagent is very stable

Reagent Preparation

4. What is the purpose of the magnesium and diethyl ether used in the Grignard Reaction?
 - a) magnesium reacts with bromobenzene to form the alcohol product, triphenylmethanol, and diethyl ether is the solvent which keeps the product in solution
 - b) magnesium reacts with ethyl benzoate to form the Grignard reagent, and diethyl ether is the solvent for the reaction, which also helps to stabilize the Grignard reagent
 - c) magnesium reacts with bromobenzene to form the Grignard reagent, and diethyl ether is the solvent for the reaction, which also helps to stabilize the Grignard reagent

Reaction

5. Which of the following are the limitations of the Grignard Reaction?
 - a) the Grignard reagent is only useful in preparing tertiary alcohols, and it is moisture sensitive
 - b) the Grignard reagent can only be formed from certain organohalides, and it is moisture, and oxygen sensitive
 - c) the Grignard reagent can only be formed from certain organohalides, and it is oxygen sensitive

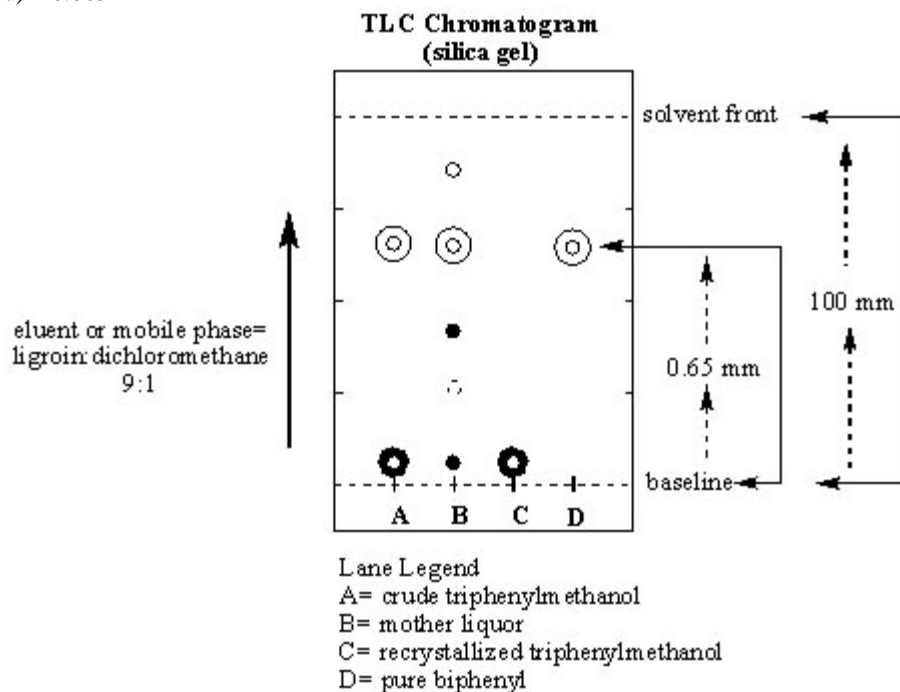

Reaction Workup

6. What is the purpose of using 50mL 2M H₂SO₄ in Part C Step 1?
 - a) To dilute and lower the pH of the mixture and thereby prevent product precipitation
 - b) To protonate the alcohol moiety of the final product
 - c) To prevent the decomposition of the Grignard reagent
7. What layer will your product be in after addition of the diethyl ether in Part C Step 3?
 - a) the aqueous layer
 - b) the ether layer

8. What is the purpose of washing the organic layer with water in Part C Step 6?
- to remove water soluble impurities
 - to remove organic impurities
 - to extract the product into the aqueous layer
 - to 'pre-dry' the organic layer, thereby removing the bulk of the water from the ether
9. What is the purpose of washing the organic layer with brine in the same Part C Step 6?
- To remove water soluble impurities
 - To remove organic impurities
 - To 'pre-dry' the organic layer, thereby removing the bulk of the water from the ether
 - To remove all water from the organic layer

Product Characterization

10. What is the Retention Factor or R_f of pure biphenyl in Lane D in the TLC sketch shown below:
- 1.54
 - 0.65
 - 0.154
 - 0.065

CHEM360 Experiment 17 Report

Date: _____

Student Name: _____

ID Number: _____

Experiment 17 Prelab Questions**Lab Safety**

- In Part A, the reduction of 4-nitrotoluene, a dangerous gas, HCl, must be trapped using a:
 - vacuum take off adaptor
 - sodium hydroxide acid-vapour gas trap
 - calcium chloride

Equipment Preparation

- In Part C, Step 8, the reaction mixture must be cooled in an ice bath prior to suction filtration because:
 - the product is least soluble in ice cold water
 - it will prevent dangerous side reactions from occurring
 - it will stop the reaction between sodium hydrogen sulfite and manganese dioxide

Reagent Preparation

- In Part C, Step 3, the reason for splitting the potassium permanganate into 10 equal portions is:
 - the potassium permanganate is not very soluble in hot water and therefore cannot be all added at once
 - the potassium permanganate is to be carefully added in portions so as to control the rate of the oxidation reaction
 - to test the student's ability to follow procedures

Reaction

- In Part C, the oxidation of 4'-methylacetanilide, the oxidizing agent is:
 - magnesium sulphate heptahydrate
 - 4'-methylacetanilide
 - potassium permanganate
 - 4-acetamidobenzoic acid
- In Part E, what is the purpose of the 100% ethanol used in Step 2.
 - it is the solvent for the Fisher esterification reaction
 - it is both the solvent and co-substrate for the Fisher esterification reaction
 - since benzocaine is highly soluble in ethanol, it is used so that the final product will not precipitate from the reaction mixture

Reaction Workup

- In Part D, the 4-acetamidobenzoic acid is hydrolyzed by the addition of _____?
 - dilute hydrochloric acid
 - water
 - water and 6.0 M hydrochloric acid
- In Part D, what is hydrolyzed, i.e., what is removed from the starting reagent to form the 4-aminobenzoic acid product?
 - acetic acid
 - ethanol
 - water

8. During a reflux, what constant states are maintained while the reaction proceeds? (there are 3)
- a) homogeneity, temperature, and volume of the solvent
 - b) homogeneity, temperature, and volume of the starting reagent
 - c) moles of reagent, moles of product, and temperature of the reaction

Product Characterization

9. Why should you not bother to perform a melting point on 4-acetamidobenzoic acid?
- a) the melting point of this compound will be too low to record accurately
 - b) the compound is very unstable and cannot be heated
 - c) the melting point of this compound will be too high to read for the thermometers provided in this course to read
 - d) the melting point of this compound is unknown
10. If you obtained % yields of 85%, 65% and 90% in a three-step synthesis, what is the overall % yield?
- a) 240%
 - b) 50%
 - c) 145%
 - d) 18%

Introduction:

Introduction (cont.):

Procedure:

(Ref:)

Changes/Modification:

Part C. Procedure for the synthesis of 4-acetamidobenzoic acid.

Procedural Step	Observations/Comments/Inferences
Record amount/appearance of pure 4-methylacetanilide used	
Reaction/Equipment Setup	
Reaction	
Reaction Work-up	

Part D. Procedure for the synthesis of 4-aminobenzoic acid.

Procedural Step	Observations/Comments/Inferences
Record amount of pure 4-acetamidobenzoic acid used	
Reaction/Equipment Setup	
Reaction	
Reaction Work-up	

Part E. Procedure for the synthesis of benzocaine.

Procedural Step	Observations/Comments/Inferences
Record amount/appearance of pure <i>p</i> -aminobenzoic acid used	
Reaction/Equipment Setup	
Reaction	
Reaction Work-up	

Table 17.1. Table of Reagents for Experiment 17

Reagent	Formula	Mwt.	d	mp	bp	Haz. Properties
4-methylacetanilide						
magnesium sulfate -7H ₂ O	MgSO ₄ -7H ₂ O					
potassium permanganate	KMnO ₄					
sodium hydrogen sulfite	NaHSO ₃					
4-acetamidobenzoic acid						
hydrochloric acid	HCl					
Ammonia (conc.)	NH ₃					
acetic acid, glacial						
4-aminobenzoic acid						
Ethanol						
sulfuric acid	H ₂ SO ₄					
sodium carbonate	Na ₂ CO ₃					
ethyl-4-aminobenzoate

Discussion:

Comments on and reasons for yield (high or low), purity (high/med/low), sources of error, overall synthesis effectiveness, etc.

Conclusion:

Structure of Product

Experiment 17 Post Lab Questions:

1. In Part C, what is the purpose of adding magnesium sulfate to the reaction mixture?
2. In the discussion pertaining to the hydrolysis of 4-acetamidobenzoic acid, it was argued that the presence of the electron-withdrawing carboxyl group in the para position could result in the occurrence of some nucleophilic displacement if the hydrolysis was carried out under acidic conditions and an elevated temperature. What would the product of such a nucleophilic displacement reaction?
3. Write the balanced equation for the oxidation of 4'-methylacetanilide to 4-acetamidobenzoic acid as carried out in Part C of the synthesis.
4. In Part E, what is the purpose of adding 100% ethanol to the reaction mixture? (use equations if necessary to answer this question)

Compound Name	Chemical Formula	Solid (S) or Liquid (L)	Formula Weight	MP or BP (°C)	Density (g/mL)	Refract. Index	Hazardous Properties*

2-octanone	CH ₃ (CH ₂) ₅ COCH ₃	L	128.22	173	0.819	1.4150	Irritant
pentane	C ₅ H ₁₂	L	72.15	36.1	0.626	1.3580	Flammable, irritant
3-pentanol	C ₂ H ₅ CH(OH)C ₂ H ₅	L	88.15	115/749mm	0.815	1.4100	Flammable, irritant
3-penten-2-one, 4-methyl	(CH ₃) ₂ C=CHCOCH ₃	L	98.15	129	0.858	1.4450	Flammable, lachrymator
petroleum ether, (Skelly B)	Mixt. Of C ₅ -C ₆	L		35-60	0.640		Flammable, toxic
petroleum ether, hi bp (ligroin)	Mixt. Of C ₆ -C ₇	L		60-80	0.656	1.3760	Flammable, toxic
phenethyl alcohol	C ₆ H ₅ CH ₂ CH ₂ OH	L	122.17	221/750mm	1.023	1.5320	Toxic, irritant
phenol	C ₆ H ₅ OH	S	94.11	40-42	1.071		Highly toxic, corrosive
phenol, 2,4-dimethyl	(CH ₃) ₂ C ₆ H ₃ OH	S	122.17	22-23	1.011	1.5380	Corrosive, toxic
phenol, 2,5-dimethyl	(CH ₃) ₂ C ₆ H ₃ OH	S	122.17	75-77	0.971		Corrosive, toxic
phenylacetylene	C ₆ H ₅ C≡CH	L	102.14	142-144	0.930	1.5490	Flamm., cancer susp.agent
phenylmagnesium bromide	C ₆ H ₅ MgBr	L	181.33		1.134		Flammable, moist.sensit.
phosphoric acid (85%, 14.7 M)	H ₃ PO ₄	L	98.00		1.685		Corrosive
potassium chromate	K ₂ CrO ₄	S	194.20	968	2.732		Canc.susp.agent, oxidizer
potassium dichromate	K ₂ Cr ₂ O ₇	S	294.19	398			Hi.toxic, canc.susp.agent
potassium hydroxide	KOH	S	56.11				Corrosive, toxic
potassium iodide	KI	S	166.01	681	3.130		Moist.sens., irritant
potassium permanganate	KMnO ₄	S	158.04	d<240	2.703		Oxidizer, corrosive
propane, 2-chloro, 2-methyl	(CH ₃) ₂ CCl	L	92.57	50	0.851	1.3848	Flammable
propane, 2-nitro	(CH ₃) ₂ CHNO ₂	L	89.09	120	0.992	1.3940	Canc.susp.agent, flamm.
propanoic acid (or propionic acid)	CH ₃ CH ₂ CO ₂ H	L	74.08	141	0.9930	1.3869	Corrosive, toxic
1-propanol	CH ₃ CH ₂ CH ₂ OH	L	60.11	97.4	0.8035	1.3850	Flammable, irritant
1-propanol, 2-methyl-	(CH ₃) ₂ CHCH ₂ OH	L	74.12	108.1	0.8018	1.3955	Flammable, irritant
2-propanol, 2-methyl-	(CH ₃) ₂ COH	L	74.12	82.3	0.7887		Flammable, irritant
propionate, ethyl	C ₂ H ₅ CO ₂ C ₂ H ₅	L	102.13	99	0.891	1.3840	Flammable, irritant
propionic acid	C ₂ H ₅ CO ₂ H	L	74.08	141	0.993	1.3860	Corrosive, toxic
rosaniline hydrochloride	C ₂₀ H ₁₄ (NH ₂) ₃ Cl	Solution	337.86	250 (dec)			Susp. cancer agent
salicylic acid	HOC ₆ H ₄ CO ₂ H	S	138.12	158-160			Toxic, irritant
salicylic acid, acetate ester	CH ₃ CO ₂ C ₆ H ₄ CO ₂ H	S	180.16	138-140			Irritant, toxic
Schiff's Reagent		Solution	of roseaniline hydrochloride & sulfur dioxide				Toxic
silane, tetramethyl	Si(CH ₃) ₄	L	88.23	26-28	0.648	1.3580	Flammable, hygroscopic
silica, sand	SiO ₂	S	60.09	NA			abrasive
silver nitrate	AgNO ₃	S	169.88	212	4.352		Highly toxic, oxidizer
sodium acetate	CH ₃ CO ₂ Na	S	82.03				hygroscopic
sodium acetate, trihydrate	CH ₃ CO ₂ Na·3H ₂ O	S	136.08	58	1.45		Hygroscopic

Compound Name	Chemical Formula	Solid (S) or Liquid (L)	Formula Weight	MP or BP (°C)	Density (g/mL)	Refract. Index	Hazardous Properties*	
sodium bisulfite	NaHSO ₃	S			1.480		Severe irritant	
sodium borohydride	NaBH ₄	S	37.38	400			Flam. solid, corrosive	
sodium bicarbonate	NaHCO ₃	S	84.01		2.159		Moist. sensitive	
sodium carbonate	Na ₂ CO ₃	S	105.99	851	2.532		Irritant, hygroscopic	
sodium chloride	NaCl	S	58.44	801	2.165		Irritant, hygroscopic	
sodium dichromate, dihydrate	Na ₂ Cr ₂ O ₇ ·2H ₂ O	S	298.00		2.350		Hi.toxic, cancer susp.agent	
sodium hydrogen carbonate	NaHCO ₃	S	84.01		2.159		See sodium bicarbonate	
sodium hydroxide	NaOH	S	40.00				Corrosive, toxic	
sodium iodide	NaI	S	149.89	661	3.670		Moist.sens., irritant	
sodium metabisulfite	Na ₂ S ₂ O ₅	S	190.10		1.480		Moist.sens., toxic	
sodium methoxide	NaOCH ₃	S	54.02				Flam. solid, corrosive	
sodium sulfate	Na ₂ SO ₄	S	142.04	884	2.680		Irritant, hygroscopic	
styrene	C ₆ H ₅ CH=CH ₂	L	104.15	146	0.909		Flammable	
styrene, β-bromo	C ₆ H ₅ CH=CHBr	L	183.05	112/20mm	1.427	1.6070	Irritant	
sucrose	C ₁₂ H ₂₂ O ₁₁	S	342.30	185-187	1.5805		Tooth Decay!	
sulfur dioxide	SO ₂	Gas	64.06	-10 bp			Nonflamm, corrosive	
sulfuric acid (conc. 18 M)	H ₂ SO ₄	L	98.08		1.840		Corrosive, oxidizer	
sulfurous acid	H ₂ SO ₃	L	82.08		1.030		Corrosive, toxic	
L-tartaric acid	HO ₂ CC ₂ H ₂ (OH) ₂ CO ₂ H	S	150.09	171-174			Irritant	
tetrahydrofuran	C ₄ H ₈ O	L	72.11	65-67	0.889	1.4070	Flammable, irritant	
tetramethylsilane	Si(CH ₃) ₄	L	88.23	26-28	0.648	1.3580	Flammable, hygroscopic	
tin	Sn	S	118.69		7.310		Flammable solid, moist.sens.	
Tollen's Reagent		L	See ammonia + silver nitrate					
toluene	C ₆ H ₅ CH ₃	L	92.14	110.6	0.867	1.4960	Flammable, toxic	
toluene, 4-nitro	NO ₂ C ₆ H ₄ CH ₃	S	137.14	52-54	1.392		Hi.toxic, irritant	
<i>o</i> - or 2-toluic acid	CH ₃ C ₆ H ₄ CO ₂ H	S	136.15	103-105			Probable irritant	
<i>p</i> - or 4-toluic acid	CH ₃ C ₆ H ₄ CO ₂ H	S	136.15	180-182			Probable irritant	
triethylphosphite	(C ₂ H ₅ O) ₃ P	L	166.16	156	0.969	1.4130	Moist. sens., irritant	
triphenylmethanol	(C ₆ H ₅) ₃ C(OH)	S	260.34	164.3			Probable irritant	
urea	NH ₂ CONH ₂	S	60.06	135	1.335		Irritant	
(-) usnic acid	C ₁₈ H ₁₆ O ₇	S	344.32	198			Toxic	
(+) usnic acid	C ₁₈ H ₁₆ O ₇	S	344.32	201-203			Toxic	
water	H ₂ O	L	18.02	100		1.33	Will burn skin when hot	
water, ice	H ₂ O	S/L	18.02	0	1.00		Frostbite, hypothermia	
xylenes	CH ₃ C ₆ H ₄ CH ₃	L	106.17	137-144	0.860	1.4970	Flammable, irritant	
zinc, dust	Zn	S	65.37	419.5			Flammable, moist.sens.	
zinc chloride, anhydrous	ZnCl ₂	S	136.28	283	2.91		Corrosive, toxic	

*Be sure to consult the chemical's MSDS for more specific detail on hazardous properties.

CHEM360 2012-14

Exp.14

Unknown # 360-14-1

Mol. Wt. = 89.09 g/mol

Chemical Formula = C₃H₇O₂N

Degrees of Unsaturation = _____

b.p. = 120°C

Infrared Spectrum (liquid film (neat) on KBr Disc)

¹H-NMR Spectra (at 60 MHz in CDCl₃)

Infrared Spectrum (liquid film (neat) on KBr disc):

¹H-NMR Integration Data: (at 60 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neigh-bouring H	Signal Assignment
						1	δ 1.6	6H				
						2	δ 4.65	1H				

Structure Assigned to Unknown 360-14-1

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-2

Mol. Wt. = 72.112 g/mol

Chemical Formula = C₄H₈O

Degrees of Unsaturation = _____

b.p. = 80°C

IR Spectra (liquid film (neat) on KBr Disc)

¹H-NMR Spectra (at 90 MHz in CDCl₃)

Infrared Spectra (liquid film (neat) on KBr disc):

¹H-NMR Integration Data: (at 90 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 1.1	3H				
						2	δ 2.1	3H				
						3	δ 2.45	2H				

Structure Assigned to Unknown 360-14-2

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-3

Mol. Wt. = 180.2 g/mol

Chemical Formula = $C_{10}H_{12}O_3$

Degrees of Unsaturation = _____

m.p. = 90°C

Infrared Spectrum (liquid film (neat) on KBr Disc)

 $^1\text{H-NMR}$ Spectra (at 60 MHz in CDCl_3)

Infrared Spectrum (liquid film (neat) on KBr disc):

 $^1\text{H-NMR}$ Integration Data: (at 60 MHz in CDCl_3)

Spectrum Region	Absorp'n Band #	Frequency (cm^{-1})	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 1.3	3H				
						2	δ 3.6	2H				
						3	δ 4.0	2H

						5	δ 11.1	1H				

Structure Assigned to Unknown 360-14-3

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-4

Mol. Wt. = 70.09 g/mol

Chemical Formula = C₄H₆O

Degrees of Unsaturation = _____

b.p. = 104°C

IR Spectra (liquid film (neat) on KBr Disc)

¹H-NMR Spectra (at 90 MHz in CDCl₃)

Infrared Spectra (liquid film (neat) on KBr disc):

¹H-NMR Integration Data: (at 90 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 2.0	3H				
						2	δ 6.15	1H				
						3	δ 6.9	1H				
						4	δ 9.5	1H				

Hint: J(2,4)=7.8Hz, J(2,3)=15.5Hz, J(1,3)=6.8Hz, J(1,2)=1.5Hz

Structure Assigned to Unknown 360-14-4

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-5

Mol. Wt. = 102.13 g/mol

Chemical Formula = C₅H₁₀O₂

Degrees of Unsaturation = _____

b.p. = 141°C

IR Spectra (liquid film (neat) on KBr Disc)

¹H-NMR Spectra (at 90 MHz in CDCl₃)

Infrared Spectra (liquid film (neat) on KBr disc):

¹H-NMR Integration Data: (at 90 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 1.4	6H				
						2	δ 2.2	3H				
						3	δ 3.8	1H		xchanges with D ₂ O		

Structure Assigned to Unknown 360-14-5

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-6

Mol. Wt. = 104.15 g/mol

Chemical Formula = C₈H₈

Degrees of Unsaturation = _____

b.p. = 146°C

IR Spectra (liquid film (neat) on KBr Disc)

¹H-NMR Spectra (at 90 MHz in CDCl₃)

Infrared Spectra (liquid film (neat) on KBr disc):

HSP-01-246

¹H-NMR Integration Data: (at 90 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 5.2	1H				
						2	δ 5.7	1H				
						3	δ 6.7	1H				
						4	δ 7.3	5H				

Structure Assigned to Unknown 360-14-6

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-7

Mol. Wt. = 121.18 g/mol

Chemical Formula = C₈H₁₁N

Degrees of Unsaturation = _____

b.p. = 210°C

IR Spectra (liquid film (neat) on KBr Disc)

¹H-NMR Spectra (at 90 MHz 10.5 mol% in CDCl₃)

HSP-00-012

ppm

Infrared Spectra (liquid film (neat) on KBr disc):

¹H-NMR Integration Data: (at 90 MHz 10.5 mol% in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment

Structure Assigned to Unknown 360-14-16

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-17

Mol. Wt. = 74.12 g/mol

Chemical Formula = C₄H₁₀O

Degrees of Unsaturation = _____

b.p. = 99.5°C

IR Spectra (liquid film (neat) on KBr Disc)

¹H-NMR Spectra (at 90 MHz in CDCl₃)

Infrared Spectra (neat liquid film on KBr disc):

HSP-00-002

ppm

¹H-NMR Integration Data: (at 90 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 0.9	3H				
						2	δ 1.2	3H				
						3	δ 1.5	2H				
						4	δ 2.4	1H		xchanges With D ₂ O		
						5	δ 3.7	1H				

Structure Assigned to Unknown 360-14-17

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-18

Mol. Wt. = 166.18 g/mol

Chemical Formula = C₉H₁₀O₃

Degrees of Unsaturation = _____

m.p. = 20.7°C

IR Spectra (on KBr Disc)

¹H-NMR Spectra (at 90 MHz in CDCl₃)

HSP-01-135

ppm

Infrared Spectra (on KBr disc):

¹H-NMR Integration Data: (at 90 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 1.54	3H				
						2	δ 4.32	2H				
						3	δ 7.05 & 7.1	2H		Hint: ortho substitution pattern		
						4	δ 7.5 & 8.1	2H				
						5	δ 10.6	1H		xchanges with D ₂ O		

Structure Assigned to Unknown 360-14-18

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-19

Mol. Wt. = 59.11 g/mol

Chemical Formula = C₃H₉N

Degrees of Unsaturation = _____

b.p. = 47.8°C

IR Spectra (liquid film on KBr Disc)

¹H-NMR Spectra (at 90 MHz in CDCl₃)

Infrared Spectra (liquid film on KBr disc):

¹H-NMR Integration Data: (at 90 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 0.92	3H				
						2	δ 1.24	2H		xchanges with D ₂ O		
						3	δ 1.45	2H				
						4	δ 2.65	2H				

Structure Assigned to Unknown 360-14-19

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-20

Mol. Wt. = 107.16 g/mol

Chemical Formula = C₇H₉N

Degrees of Unsaturation = _____

b.p. = 200.5°C

IR Spectra (on KBr Disc)

¹H-NMR Spectra (at 400 MHz in CDCl₃)

Infrared Spectra (on KBr disc):

HSP-49-133

¹H-NMR Integration Data: (at 400 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 2.2	3H				
						2	δ 3.5	2H		xchanges with D ₂ O		
						3	δ 6.6	2H				
						4	δ 6.95	2H				

Structure Assigned to Unknown 360-14-20

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-21

Mol. Wt. = 138.2 g/mol

Chemical Formula = C₈H₁₀O₂

Degrees of Unsaturation = _____

b.p. = unknown °C

IR Spectra (thin film on KBr disc)

¹H-NMR Spectra (at 400 MHz in 0.029 g in 0.5 mL CDCl₃)

Infrared Spectra (on KBr disc):

HSP-42-609
¹H-NMR Integration Data: (at 400 MHz in CDCl₃)

Spectrum Region	Absorp'n Band #	Frequency (cm ⁻¹)	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 2.25	3H				
						2	δ 3.75	3H				
						3	δ 5.31	1H				
						4	6.2	3H	multiplet			

Structure Assigned to Unknown 360-14-21

Compound Name:

CHEM360 2012-14

Exp.14

Unknown # 360-14-22

Mol. Wt. = 172.2 g/mol

Chemical Formula = $C_8H_{12}O_4$

Degrees of Unsaturation = _____

m.p. = 1-2 °C

IR Spectra (liquid)

 1H -NMR Spectra (at 300 MHz, 10.4 mol% $CDCl_3$)

Infrared Spectra (liquid film):

 1H -NMR Integration Data: (at 300 MHz in $CDCl_3$)

Spectrum Region	Absorp'n Band #	Frequency (cm^{-1})	Peak Shape (sharp, broad)	Peak Intensity (strong, med. or weak)	Functional Group Indicated	Signal #	Shift	Integrat'n	Splitting	Comment	#Neighbouring H	Signal Assignment
						1	δ 1.32	6H		2 x 3H?		
						2	δ 4.26	4H		2 x 2H?		
						3	δ 6.9	2H				

Structure Assigned to Unknown 360-14-22

Compound Name:
